

Gyanverse Core Modules

How To Read This Deck

- Each card explains one backend module.
- Purpose: what business problem it solves.
- Simple use: one real scenario
- Together, these modules form the full coaching platform backbone.

Core Access and Organization Modules

Auth

Handles sign-in, sessions, OTP, and identity verification.

Simple use: User logs in with phone/email and gets access to the platform.

Tenant

Manages coaching institute identity and tenant-level settings.

Simple use: Create a new coaching and route users into the right institute.

Membership

Controls who belongs to a coaching and with what role.

Simple use: Student joins a coaching using a join code.

Invite

Sends and tracks invites for teachers and members.

Simple use: Owner invites a teacher to join the coaching.

Class

Creates and manages batches/classes and enrollments.

Simple use: Teacher creates Class 10 batch and adds students.

Learning and Assessment Modules

Exam

Creates test definitions, papers, and schedules.

Simple use: Coaching publishes a weekly mock test for a class.

Exam Session

Runs individual student test attempts and timing state.

Simple use: Student starts exam at 4:00 PM and submits before timeout.

Evaluation

Scores submissions and stores result breakdowns.

Simple use: System auto-checks answers and generates marks section-wise.

Report

Builds progress reports for students, classes, and exams.

Simple use: Teacher views monthly performance report for each student.

Analytics

Produces trend metrics, funnels, and performance insights.

Simple use: Owner sees pass rate trend and attendance-performance correlation.

Operations, Revenue, and Platform Modules

Notification

Delivers alerts and reminders across channels.

Simple use: Students receive reminder 1 hour before exam starts.

Billing

Applies subscription plan rules and usage limits.

Simple use: Free plan blocks creating more classes after plan limit.

Payment

Processes subscription payments and webhook confirmations.

Simple use: Owner upgrades plan and payment status updates automatically.

Storage

Stores and serves files like documents and media.

Simple use: Teacher uploads question PDF and it is linked to exam.

Admin

Provides platform-level oversight and control tools.

Simple use: Super admin reviews tenant health and disables abuse accounts.

Module Flow in One View

Identity + Access

Learning Engine

Business Engine

- Identity + Access: Auth, Tenant, Membership, Invite
- Learning Engine: Class, Exam, Exam Session, Evaluation, Report, Analytics
- Business Engine: Billing, Payment, Notification, Storage, Admin

- Clear module boundaries mean faster development and easier scaling.
- Each module maps directly to a client-visible business capability.
- This structure reduces risk when adding new features in future phases.
- The platform can grow institute-by-institute without architecture rewrites.
